Assessment of chronic ankle instability

Kathryn M Refshauge*, Claire E Hiller

From 3rd Congress of the International Foot and Ankle Biomechanics Community
Sydney, Australia. 11-13 April 2012

Chronic ankle instability is a complex problem which often follows ankle sprain. This workshop will discuss the latest models of chronic ankle instability and give an overview of the latest research in the area. Assessment tools available in the clinic as well as the laboratory setting will be demonstrated in the workshop with the opportunity for participants to practice. Assessments covered will include; balance, strength, joint laxity, motor control, and proprioception.

Submit your next manuscript to BioMed Central
and take full advantage of:

- Convenient online submission
- Thorough peer review
- No space constraints or color figure charges
- Immediate publication on acceptance
- Inclusion in PubMed, CAS, Scopus and Google Scholar
- Research which is freely available for redistribution
