Evidence-based guidelines for the management of diabetic foot problems

Jonathan Shaw

From Australasian Podiatry Council Conference 2011
Melbourne, Australia. 26-29 April 2011

Management of diabetic foot problems presents a series of complex challenges for patients and for health care professionals. Appropriate guidance on best practice is essential to delivering high-quality care. The NHMRC guidelines for the management of diabetic foot problems in primary care have just been updated to address this issue. The guidelines have been developed using systematic reviews of the literature, and broad consultation of organisations representing the relevant health care professionals and patients. The development of the guidelines, the evidence considered and the recommendations developed will be reviewed.
